We often participate in exhibitions.

Choose us and we will bring you professional products and excellent service.

Front idler assembly is made of shell, bronze bushing, collar, seal, lock pin, plug, shaft. It is made by casting, machining, heat treatment, assembly, painting etc.The quality and working life for front idler assembly is depends on the quality of raw steels, the hardness of rail surface, the depth of hardness layer, the quality of seal group etc.

Product Parameter (Specification)

Model Name	Front idler assembly
brand	SA
Material	50Mn
Color	Black or Yellow
Surface Hardness	HRC48-55
Application	Crawler excavator
Warranty time	1000 hour
Technique	casting
Usage	Crawler track chain machine
Application	Excavator parts

Product Details

The front idler assembly, which is helpful to the stability of the front idler bearing system. Front idler is very common in machinery, it helps to connect the remote shaft. It just changes the steering and does not change the gear train ratio., is one part of undercarriage parts for crawler heavy equipment such as excavator, bulldozer.
